

Problem Statement No. 22 – Interview Trainer Agent

IBM Cloud Lite Services & Granite — Agentic AI Track

The Challenge

Preparing for job interviews is stressful and inconsistent — candidates often don't know what to expect for a specific role, experience level, or industry. Interview questions, behavioral scenarios, and HR expectations are scattered across job portals, professional networks, and company-specific interview experiences, making it hard to prepare in a structured way. Without personalized, role-specific guidance, many candidates walk into interviews underprepared, unsure of both the technical questions they'll face and how to present their soft skills convincingly.

The Objective

Build an AI-powered Interview Trainer Agent that delivers personalized interview preparation for job seekers across experience levels and industries. The solution should:

- **Personalized Question Sets** – Generate tailored interview questions based on profile name, experience level, and job role.
- **Interview Data RAG Retrieval** – Fetch and summarize role-specific interview questions, industry expectations, behavioral scenarios, and HR guidelines from a structured knowledge base.
- **Resume-Based Preparation & Feedback** – Allow users to input their resume or job title, and instantly receive targeted questions, model answers, and improvement tips.
- **Comprehensive Skill Assessment** – Cover both technical and soft-skill/behavioral interview preparation for a well-rounded readiness experience.
- **Multi-Agent System** – Interview Knowledge Agent (retrieves role-specific questions, scenarios, and HR guidelines); Question Recommendation Agent (builds personalized question sets and model answers); Improvement Advisory Agent (delivers soft-skill and behavioral improvement tips); Resume & Profile Analysis Agent (parses resume/job title to enrich personalization).
- **Visualization Dashboard** – Show a readiness score, technical vs. behavioral category breakdown, and progress across practice sessions.
